Physics 3181 — Spring 2017

Computational Physics

Physics 3181 Lectures: Mon/Wed 2:20-3:35 pm, Staughton Hall, Room TBD
Instructor: Prof. Oleg Kargaltsev
Office: Staughton Hall 202; Office hours: Monday 4-5 pm, or by appointment
Email: kargaltsev@gwu.edu
Prerequisites: MATH 2233 and PHYS 3161, programming experience

Short description: The purpose of this course is to discuss and practice a number of numerical methods that are useful in solving Physics, Astrophysics, and Applied Mathematics problems. The course will cover a good fraction of methods that are frequently encountered in these fields. These methods are well established and have a solid theoretical foundation. Our focus will be less on the theoretical underpinnings and more on practical use of these methods to solve concrete problems.

Details: The course is project driven and a new topic will be discussed every week. To help you understand the material and to provide an assessment of your progress, you will have to solve a homework each week. The homework will be motivated by physics problems and to solve then you will rely on the numerical methods covered in class. Required physics background will be reviewed in class.

The programming tools we plan to use in this course are C and Mathematica. We will use C to practice low-level programming and solve some basic computational problems. Mathematica will be used for higher-level problems, to assist with debugging the codes and verifying C-code results, to further analyze the results of computations, to create plots and animations, etc. For each homework set, you will be asked to write a report (preferably in Latex, a tool that will allow you to typeset equations, include graphs to support your presentation, and create a bibliography). An effective workflow depends on your ability to easily connect these tools. Students are encouraged to bring their own laptops and configure them appropriately. The use of Unix (the one in Mac OS or other flavor) is preferred (instructor will have laptop with Mac OS).

Learning Outcomes: Upon completion of this course you will be able to write programs in C and Mathematica and apply programming skills in conjunction with the laws of physics to solve specific real-life physics and astrophysics problems.

Students will acquire the following specific skills that will be verified via specially designed, graded homework assignments:

- Numerical Integration
- Integration of differential equations
- Linear algebra
- Hypothesis testing
- Chaos/N-body dynamics
- Machine Learning
- Monte Carlo methods
- Root finding
- Fourier transforms
Textbook: No textbook is required for this course. Notes and printouts will be provided by the instructor as needed. If you still prefer to have a textbook, some recommendations will be provided during the first class.

Assignments: Coding homework projects will be posted regularly at the class web site on Blackboard http://blackboard.gwu.edu. Homework must be turned in as a printed report. The report must contain statement of the problem, algorithm/method description, code, results of calculations in numerical and/or graphical form, physical interpretation of the results by student. The assignments will be graded by the instructor using rubric assessment for each of these components. Assignments may also require turning is a documented code in C or Mathematica (uploaded to Blackboard or sent by e-mail). Students must visit the class Blackboard site regularly.

Expected Time Investment: Over 14 weeks students will spend 3 hours per week in classroom activities (lectures, quizzes, problem-solving and programming projects). Minimum amount of independent, out-of-class, learning expected per week is 8 hrs

Outline of classes for Spring 2017

<table>
<thead>
<tr>
<th>Week</th>
<th>Dates</th>
<th>Topic</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>

</table>
**Attendance:** the students are expected to attend every class. If you have to miss >2 classes, you should discuss this with the instructor. Note that if you miss a class, your grade for the in-class quiz will be zero. All requests to have an absence excused must be substantiated with documentation. Valid excuses include personal illness (with a doctor's note), family emergency, GW sanctioned travel for a team sport, or religious holiday.

**Course Grade:** The final grade will be based mostly on homework (60% reports + 20% code). The rest of the grade will come from in-class quizzes (20%). For in-class quizzes, the lowest two scores are not taken into account.

---

**ONLINE RESOURCES**

The course webpage will be on Blackboard (http://blackboard.gwu.edu/). Course announcements will be posted on this site. Any distributed reading materials and any PowerPoint slides shown in class will be made available online after each class. After entering Blackboard, it is necessary for you to click on the course name (PHYS 3181). You are automatically subscribed within the Blackboard system to the courses for which you are registered (but you also must have a valid GW e-mail address to login).

---

**University Policies**

**Academic Integrity:**

Any acts of academic dishonesty will be dealt with according to the GW Code of Academic Integrity. Cheating compromises the integrity of our course and is unfair to those students who earn their grade through honest hard work. We have a zero-tolerance policy regarding cheating. For the full Academic Integrity code, see: https://studentconduct.gwu.edu/code-academic-integrity

**Accommodations for Students with Disabilities:**

Any student who feels that an accommodation may be needed based on the impact of a disability should contact the instructor privately to discuss specific needs. Please also contact the Disability Support Services office at 202-994-8250 in Rome Hall, Suite 102, to establish eligibility and to coordinate reasonable accommodations. For additional information, refer to: https://disabilitysupport.gwu.edu/.
Mental Health Services (202-994-5300):

The University's Mental Health Services offers 24/7 assistance and referral to address students' personal, social, career, and study skills problems. Services for students include: crisis and emergency mental health consultations confidential assessment, counseling services (individual and small group), and referrals.

counselingcenter.gwu.edu/

University Policy on Religious Holidays:

1. Students should notify faculty during the first week of the semester of their intention to be absent from class on their day(s) of religious observance.

2. Faculty should extend to these students the courtesy of absence without penalty on such occasions, including permission to make up examinations.

3. Faculty who intend to observe a religious holiday should arrange at the beginning of the semester to reschedule missed classes or to make other provisions for their course-related activities.

The full University policy regarding religious holidays can be found at https://provost.gwu.edu/files/downloads/Resources/Religious-Holiday-Calendar-2015-2016.pdf

Classroom Emergency Preparedness and Response Information

To Report an Emergency or Suspicious Activity
Call the University Police Department at 202-994-6111 (Foggy Bottom) or 202-242-6111 (Mount Vernon). If the line is unavailable or you are calling from another University location, dial 911.

Shelter in Place – General Guidance
Although it is unlikely that we will ever need to shelter in place, it is helpful to know what to do just in case. No matter where you are on campus, the basic steps of shelter in place will generally remain the same:
* If you are inside, stay where you are unless the building you are in is affected. If it is affected, you should evacuate. If you are outdoors, proceed into the closest GW building or follow instructions from emergency personnel on scene.
* Shelter-in-place in an interior room, above ground level, and with the fewest windows. If sheltering in a room with windows, keep away from the windows. If there is a large group of people inside a particular building, several rooms maybe necessary.
* Shut and lock all windows (locking will form a tighter seal) and close exterior doors.
* Turn off air conditioners, heaters, and fans. Close vents to ventilation systems as you are able. (Facilities staff will turn off ventilation systems as quickly as possible).
* Make a list of the people with you and call the list in to UPD so they know where you are sheltering.
* Visit GW Campus Advisories for incident updates [http://campusadvisories.gwu.edu](http://campusadvisories.gwu.edu) or call the GW Information Line 202-994-5050. If possible, turn on a radio or television and listen for further instructions. If your e-mail address or mobile device is registered with Alert DC, check for alert notifications.
* Be comfortable and look after one other. You will get word as soon as it is safe to come out.

An **evacuation** will be considered if the building we are in is affected or we must move to a location of greater safety. We will **always** evacuate if the fire alarm sounds. In the event of an evacuation, please gather your personal belongings quickly (purse, keys, cell phone, GWorld card, etc.) and proceed to one of the nearest exits. Do not use the elevator. Once we have evacuated the building, proceed to meet in front of the building.

**Alert DC** provides free notification by e-mail or text message during an emergency. Visit GW Campus Advisories for a link and instructions on how to sign up for alerts pertaining to GW. If you receive an Alert DC notification during class, please share the information immediately.

**GW Alert** provides popup notification to desktop and laptop computers during an emergency. In the event that we receive an alert to the computer in our classroom, we will follow the instructions given. You are also encouraged to download this application to your personal computer. Visit GW Campus Advisories to learn how.

Additional information about emergency preparedness and response at GW as well as the University’s operating status can be found on GW Campus Advisories [http://campusadvisories.gwu.edu](http://campusadvisories.gwu.edu) or by calling the GW Information Line at 202-994-5050.
